

DREAM A DREAM

TEAM 13

Event: CODE FOR GOOD

Date: 23.07.2016-24.07.2016

NEED: Automation and Accuracy

- Data Management
- Notifications
- User Tracking
- Scalability
- Accessibility
- Workshops
- Feasibility

The SOLUTION

- Feasible application that covers everything nearly each of the points with use of existing API's like:
- EXOTEL calling and sms API
- GOOGLE Charts API
- Use of MYSQL database that can be scaled over time with easy and flexible dynamic graph views

The Road ahead

Adding more precise IVR support that could actually call users according to the growing business needs

Adding location mapping for users to enable better tracking

Create a full fledged android/ios app as support

THANK YOU
